

PCI Graphics is now **G-Floor Certified!**

PCI Graphics is proud to be **1 of 10**
G-Floor Certified companies in the United States.

G-Floor is a commercial grade vinyl flooring that may be customized via grand-format solvent and UV digital screen printing equipment. With G-Floor, you are no longer creating floor graphics, but graphic floors. The product allows the user to print directly to the second surface (underside) of the material. G-Floor offers greater durability, versatility, and customization as compared to traditional vinyl floor graphics. Endless applications include retail/POP, sports arenas, movie theaters, trade shows, bar/restaurants, temporary floor graphics or mats, counter tops, bank counters, chair mats, mouse pads, and much more. G-Floor products are available in roll widths of 54", 60", and 120".
